USSN: 09/942,334

Art Unit: 2859

IN THE CLAIMS:

Please amend the claims as follows:

1. (Currently Amended) An electronic thermometer comprising:

a removable module having a memory and capable of storing a temperature sensitive

 \underline{probe} , a temperature probe storage chamber and a supply of disposable probe covers $\underline{a\ probe}$

cover storage chamber, wherein said memory stores calibration information; and

a temperature calculating unit removably mating to said removable module.

2. (Currently Amended) An electronic thermometer comprising:

a removable module having a memory, and capable of storing a temperature sensitive

probe storage chamber and a supply of disposable probe covers probe cover storage chamber,

wherein said memory stores temperature probe identifying information; and

a temperature calculating unit removably mating to said removable module.

3. (Original) An electronic thermometer according to claim 1 wherein said

memory is capable of electrical communication with said temperature calculating unit when said

removable module is installed to said temperature calculating unit.

4. (Original) An electronic thermometer according to claim 1 wherein said

calibration information includes at least two calibration reference point parameters wherein each

of said at least two calibration reference point parameters are taken at different temperatures.

USSN: 09/942,334

Art Unit: 2859

5. (Previously Presented) A method of preventing contamination of a removable temperature probe in an electronic thermometer comprising the steps of:

storing probe-identifying information in a memory chip;
connecting said memory chip to said temperature probe;
storing said temperature probe in a removable module;
storing a supply of clean disposable temperature probe covers in said removable module;
removably connecting said removable module to a temperature calculating unit; and
communicating said probe-identifying information from said memory chip to said
temperature calculating unit.

6. (Previously Presented) An electronic thermometer comprising:

at least one removable module including a temperature probe and means for storing a supply of clean probe covers;

at least one temperature calculating unit capable of mating to said at least one removable module;

means for storing probe identifying information within said at least one removable module; and

means for communicating said probe identifying information between said means for storing and said temperature calculating unit.

- 7. (Original) An electronic thermometer according to claim 1 wherein said memory includes an EEPROM.
- 8. (Original) An electronic thermometer according to claim 1 wherein said memory is a 256 bit, 1-Wire, parasite-power, EEPROM.
- 9. (Original) An electronic thermometer according to claim 1 wherein said removable module includes means for storing probe-specific algorithm parameters.

USSN: 09/942,334

Art Unit: 2859

10. (Original) An electronic thermometer according to claim 1 wherein said

memory is encapsulated within said removable module.

11. (Original) An electronic thermometer according to claim 1 wherein said

memory is incorporated in a probe assembly of said removable module.

12. (Original) An electronic thermometer according to claim 11 wherein

connections to said memory are protected from fluid incursion.

13. (Original) An electronic thermometer according to claim 11 wherein said

memory is disposed in a connector portion of a probe cable assembly of said removable module.

14. (Original) An electronic thermometer according to claim 1 wherein said

removable module includes a probe assembly incorporated therewith, said probe assembly

comprising a temperature probe, an electrical cable and a first connector component, and

wherein said first connector component includes fluid resistant mating terminals providing

electrical connections to said probe and said memory wherein said memory is incorporated

within said probe assembly.

15. (Original) An electronic thermometer according to claim 14 wherein said

memory is overmolded within said first connector component.

16. (Original) An electronic thermometer according to claim 14 wherein said

temperature calculating unit includes a header assembly incorporated therewith, said header

assembly including header terminals in electrical connection with a microprocessor system, said

header assembly matable with said first connector component of said removable module.

17. (Original) An electronic thermometer according to claim 16 wherein said

header assembly is fluid resistant, said header assembly preventing fluid incursion to said

microprocessor system.

USSN: 09/942,334

Art Unit: 2859

18. (Original) An electronic thermometer according to claim 14 wherein said

probe includes at least one thermistor electrically connected with said terminals, and wherein

said calibration information includes resistance values of each of said at least one thermistor,

said resistance values corresponding to at least two different reference temperatures.

19. (Original) An electronic thermometer according to claim 14 wherein said

memory stores temperature probe identifying information.

20. (Original) An electronic thermometer according to claim 19 wherein said

probe identifying information includes a unique identification number associated with said

temperature probe.

21. (Original) An electronic thermometer according to claim 20 wherein said

unique identification number is a pre-programmed and validated EEPROM registration number.

22. (Previously Presented) An electronic thermometer comprising:

a temperature calculating unit; and

a removable module including storage for a supply of clean probe covers and a probe

assembly incorporated therewith, said probe assembly comprising a temperature probe, a cable

having a first end connected to said temperature probe and a second end connected to a

connector portion; wherein said connector portion includes fluid resistant mating terminals

providing electrical connections to said probe and, a memory wherein said memory is

incorporated within said probe assembly;

wherein said memory stores temperature probe identifying data and temperature probe

calibration data, said temperature probe identifying data including a unique identification number

associated with said temperature probe;

USSN: 09/942,334

Art Unit: 2859

wherein said temperature probe includes at least one thermistor electrically connected

with said mating terminals and wherein said temperature probe calibration information includes

resistance values of each of said at least one thermistor, said resistance values corresponding to

at least two different reference temperatures; and

wherein said temperature calculating unit includes a header assembly incorporated

therewith, said header assembly including header terminals in electrical connection with a

microprocessor system, said header assembly matable with said connector portion of said

removable module, wherein said header assembly is fluid resistant, said header assembly

preventing fluid incursion to said microprocessor system.

23. (Currently Amended) An electronic thermometer according to claim 1 wherein said

removable module includes an isolation chamber that temperature probe storage chamber

prevents storage of said temperature sensitive probe while a probe cover is installed on said

temperature sensitive probe.

24. (Previously Presented) An electronic thermometer according to claim 1 wherein

said removable module comprises an at least partially transparent housing for viewing said

supply of disposable probe covers.

25. (Previously Presented) The method according to claim 5 further comprising the

step of providing means to store said temperature probe within said module for preventing

storage of said temperature probe while a probe cover is installed thereon.

26. (Previously Presented) The thermometer according to claim 22 wherein said

removable module comprises an isolation chamber that prevents storage of said temperature

probe while a probe cover is installed thereon.

27. (Previously Presented) The thermometer according to claim 22 wherein said

removable module comprises an at least partially transparent housing for viewing said supply of

disposable probe covers.

USSN: 09/942,334

Art Unit: 2859

28. (Previously Presented) An electronic thermometer comprising:

a removable module comprising a memory storing probe identification and calibration information,

said removable module comprising a probe storage chamber and probe cover supply storage chamber permanently attached to said probe storage chamber; and a temperature calculating unit removably mating to said removable module.
